

TTP TITLE: Review of Hanford International Activities

TTP NUMBER: RL 434301

PRINCIPAL INVESTIGATOR: D.G. Panther, Westinghouse Hanford

Summary

Hanford initiated a review of international activities to collect, review, and summarize information on international environmental restoration and waste management initiatives considered for use at Hanford. This effort focused on Hanford activities and accomplishments, especially international technical exchanges and/or the implementation of foreign-developed technologies.

Activities

The Foreign Travel Management System (FTMS) and the Visitor Access Management System (VAMS) were used initially in an attempt to identify the countries involved with EM-related travel as well as the people traveling. Additional information from interviews and trip reports is yielding the information needed to evaluate the Hanford international activities as the travelers are identified. Related published articles and papers on technology transfer and U.S. foreign interactions will provide background information for use in evaluating the effectiveness of the Hanford international activities.

Accomplishments

- Reports were outlined on technologies that have been or are being considered for use at Hanford.
- Hanford issued an annotated outline of reports describing existing and planned efforts for commercialization and export of technologies from Hanford to foreign countries.
- A draft report on foreign technologies was also issued.
