

NEW INCENTIVE SCHEME FOR SMR INTRODUCTION IN DEVELOPING COUNTRIES.

XA0101133

P.C. Florido
Comisión Nacional de Energía Atómica, Argentina

Argentina, in the last 20 years exported 4 experimental reactors, the last one to Australia, due to a particular situation very competitive for small reactors and installations.

Our country is a developing country, with a strong position in Small and Medium Nuclear Business, so our knowledge about how to introduce nuclear reactors in developing countries is large and client focused.

We have developed a new incentive basis for SMR introduction in developing countries through a very innovative approach, for different developing countries' needs.
